MOBILITY SOLUTIONS

Secure a wheelchair passenger

There are 5 belt pop-ups per wheelchair space, which can be completely covered with a lid. In 4 of these belt pop-ups there are safety belts with a hook and lamp, meant to secure a wheelchair and keep it in place during a journey. The adjustable seatbelt column is used to secure the wheelchair passenger. The buckle for that last belt is in the fifth belt pop-up in the floor.

Touch-screen control - Safe and easy

For daily, intensive use, you want an easy-to-operate system. This is provided by a touch-screen that allows you to operate the Mercedes-Benz Sprinter L2 disability car. The touch-screen is placed at the driver's side, where he/she activates the process for the correct wheelchair position. This opens the front two belt pop-ups and extends and illuminates the hooks so they are clearly visible, even in the dark.

Great visibility and flexibility

The wheelchair passenger always has good visibility through the windows, because the tip-and-turn seats are the only seats in their class to be folded down under the windows. When there is no wheelchair passenger in the wheelchair space, the tip-and-turn seats can be folded down for other passengers.

Safe passenger transport

If the belt pop-ups that are integrated in the B-FIT floor are not used, they are automatically covered by a lid. This creates a completely flat floor on which passengers are less likely to stumble in the passenger bus.

Boarding and alighting

B-Style delivers a lowered entry step for the passenger door, the B-Open for the LHD. This is a lowered step for easier entry, which eliminates the front passenger seat. In addition to easy entry, the advantage of this step is that there is room for ten tip-and-turn seats. The other option is a Sprinter with sliding door, which has space for nine additional seats.

Personalizing your Sprinter Wheelchair Bus

You decide how many tip-and-turn seats you want. The number of wheelchair spaces is 3 or 4; the choice is yours. You can also choose a panel in the headliner with ambient lighting, a safety hammer ventilation and space for extra speakers.

With sliding door

No sliding door

Configuration options

With the B-FiT floor system the number of (wheelchair) passengers you can carry is flexible. If you do not use a wheelchair position, you can use two tip-and-turn seats instead. There are many configurations to choose from, depending on your Sprinter and wishes.
